https://github.com/shashankmishraa/BHIV-HR-Platform.git , "Analyse my code throughly with every files and folders, then give me step by step instructions for deploying it on render"

❋ **Answer** ⋯ **Sources · 19** ⊱ **Steps**

I apologize, but I cannot access the specific GitHub repository you provided (https://github.com/shashankmishraa/BHIV-HR-Platform.git). The direct repository access failed, and my search didn't return information about your specific BHIV-HR-Platform repository.

However, I can provide you with **comprehensive step-by-step deployment instructions for Render** that will work for most common web applications, including HR platforms. I'll need you to share some basic information about your codebase to give you the most accurate deployment steps.

Pre-Analysis Questions

Before proceeding with the deployment guide, please provide the following details about your BHIV-HR-Platform:

1. **Tech Stack**: What technologies are you using? (e.g., Node.js, Python/Django, React, PHP, etc.)

2. **Database**: What database are you using? (PostgreSQL, MySQL, MongoDB, etc.)

3. **Build Process**: Do you have a `package.json`, `requirements.txt`, or similar dependency file?

4. **Environment Variables**: Are there any environment variables or configuration files needed?

General Render Deployment Guide

Here's a comprehensive deployment process that covers most common scenarios:

📄 docker-compose.production.yml ✕ 📄 LIVE_DEMO.md ✕ 📄 README.md ✕
